

UreyukiBox — Product Overview

Stocky, Shopify's own inventory and purchasing app, ends on 31 August 2026, and every Stocky API stops that day. It remains read-only for export for at least 90 days, but suppliers cannot be exported from Stocky. UreyukiBox has been **live on the Shopify App Store since 30 July 2026** as a migration and purchasing option for Shopify stores worldwide.

UreyukiBox is **one Stocky migration option for ordinary Shopify stores in and outside Japan**. It provides a daily ordering / receiving workflow, Japanese and English interfaces, country-scoped seasonality, editable purchase-tax presets and persistent demand / lead-time / MOQ policies. The **order-to-receipt loop runs entirely inside the app**, writing stock back to the same native Shopify ledger Stocky used. Stock adjustments, stocktakes and barcode scanning are supported; transfers between locations require Business.

A note on language and country. The interface follows your Shopify admin language; notifications follow the store's country. **Notification emails, Slack and LINE messages, and supplier purchase-order emails are available in English, and support is provided in Japanese and English.** Seasonality uses the store's country calendar and tax fields follow the store's applicable presets; Japan-specific registration fields appear only for Japan.

Core capabilities

Capability	What it does
Reorder reminders	Sales velocity, safety stock, intermittent demand and a 51-country seasonal calendar. Event timing does not require a full year of history, but quantities use the store's own sales; where there is no basis, no numeric suggestion is produced. The arithmetic stays visible on screen
Tax-by-rate purchase orders	Drafts a PO per supplier automatically. Edit quantity, unit price and purchase-tax rate, then export to PDF or CSV, or email it to the supplier. Prints tax-by-rate details, applicable registration information and your own business details; zero-rate countries do not get a misleading tax section

Capability	What it does
Receiving and PO statuses	"Mark as ordered" confirms a PO and deducts the incoming quantity from the next suggestion. Record receipts including partial deliveries, with barcode scanning
Warehouse operations	Stock adjustments with reason codes, stocktakes (barcode scanning or a bulk CSV of counted quantities), transfers between locations (Business), barcode label printing
Landed cost	Allocate freight, duties and other charges across the lines of a purchase order to get a landed unit cost (Pro and above). Allocate by value or by quantity. Never written back to the product cost
Profit and supplier reports	Margin by product, plus order volume, average lead time and on-time rate by supplier, over a date range (Pro and above). Lines excluded for a missing cost or unsynced revenue are always reported as a count
Notifications	Email / Slack / LINE (Slack and LINE on Pro; LINE once per day). Message language follows the store's country
Interface language	Japanese and English — follows your Shopify admin language automatically. Purchase-order PDFs, barcode labels and CSVs are localised too; notifications and supplier PO emails are available in English
Seasonal / tax country presets	Seasonal events for 51 countries; purchasing-tax presets for 53. US, CA, BR, HK, ID and MY provide labels without a prefilled rate

Capability	What it does
Stocky migration (optional)	Two independent routes: through 31 August, the API copy retains suppliers, PO and general-adjustment parents/lines, tax types and per-record API-acquired payloads, and recovers product-supplier candidates from PO history. From 1 September, Stocky CSV import accepts Low Stock, stocktake, PO, adjustment, inventory, transfer, cost and other exports, plus merchant-created supplier, product-term and purchase-tax CSVs. MOQ/Statistics also accept pasted tables; manual notes and evidence are stored separately. Browse supported data in Stocky data's six merchant-facing categories and export CSV/PDF. Stores that never used Stocky skip this

Safety — stock changes only when you act

Syncing, forecasting and drafting purchase orders **read** your Shopify data and nothing more. Your Shopify stock changes only when **you** act in the app — recording a receipt, recording a stock adjustment, confirming a stocktake, or recording a transfer between locations. Nothing is written automatically. By design, installing the app cannot leave your stock out of step.

Migration and refund guarantee

If the Stocky API copy cannot be completed for reasons on our side, we **refund the full subscription fee for the billing month immediately following the migration**. The independent Stocky CSV import and pasted MOQ/Statistics tables are excluded.

Imported suppliers feed current operations. Saved API records and their acquired payloads, plus CSV originals, pasted MOQ/Statistics source text, source conditions and parseable normalized rows, are browsable and searchable in Stocky data, with CSV/PDF export; generic normalized rows outside the plan are masked by the server. Saved CSV originals and pasted MOQ/Statistics source text can be imported again; Notes, supplier notes, PO notes and other API/CSV omissions can be retained as provenance-linked manual notes and evidence. Sales-purpose tax types do not affect current purchase-tax settings, and current-product tax assignments are not changed.

Pricing (excluding tax; paid plans include a 14-day free trial)

Plan	JPY-billed / non-JPY store	Product / location limit
Free	¥0 / \$0	100 / 1 location
Starter	¥2,980 / \$19	1,000 / 2 locations
Pro	¥5,980 / \$39	10,000 / 5 locations
Business	¥12,800 / \$83	Unlimited / unlimited locations

The Free plan already covers manual qualified-invoice purchase orders, inventory visibility and the Stocky import routes described above. Automatic order-quantity calculation, reorder-point management, auto-drafting from the forecast and the daily email alert start at Starter; Slack and LINE alerts at Pro.

Shopify bills the fixed JPY amount to JPY-billed stores and the fixed USD amount to every non-JPY store. Per-location destinations and analysis work up to each plan's location cap; transfers between locations require Business. (Pricing as of 2026-08-27.)
